

Edwin Martinez
About Me Website

My website will be used to demonstrate my ability to use HTML, CSS and JavaScript.

This website will have multiple pages with content about me. I will be using this page as a portfolio for the work showcase some of the work that I have done in the past. This webpage will be beneficial for me as I am looking for jobs, I can link it in my applications. I believe that this would be better than simply linking my GitHub, because again, it demonstrates my ability to work with the technologies that I listed above.

For my technology stack I will need HTML and CSS. JavaScript will be added when and if it is needed.
